## CAD product data

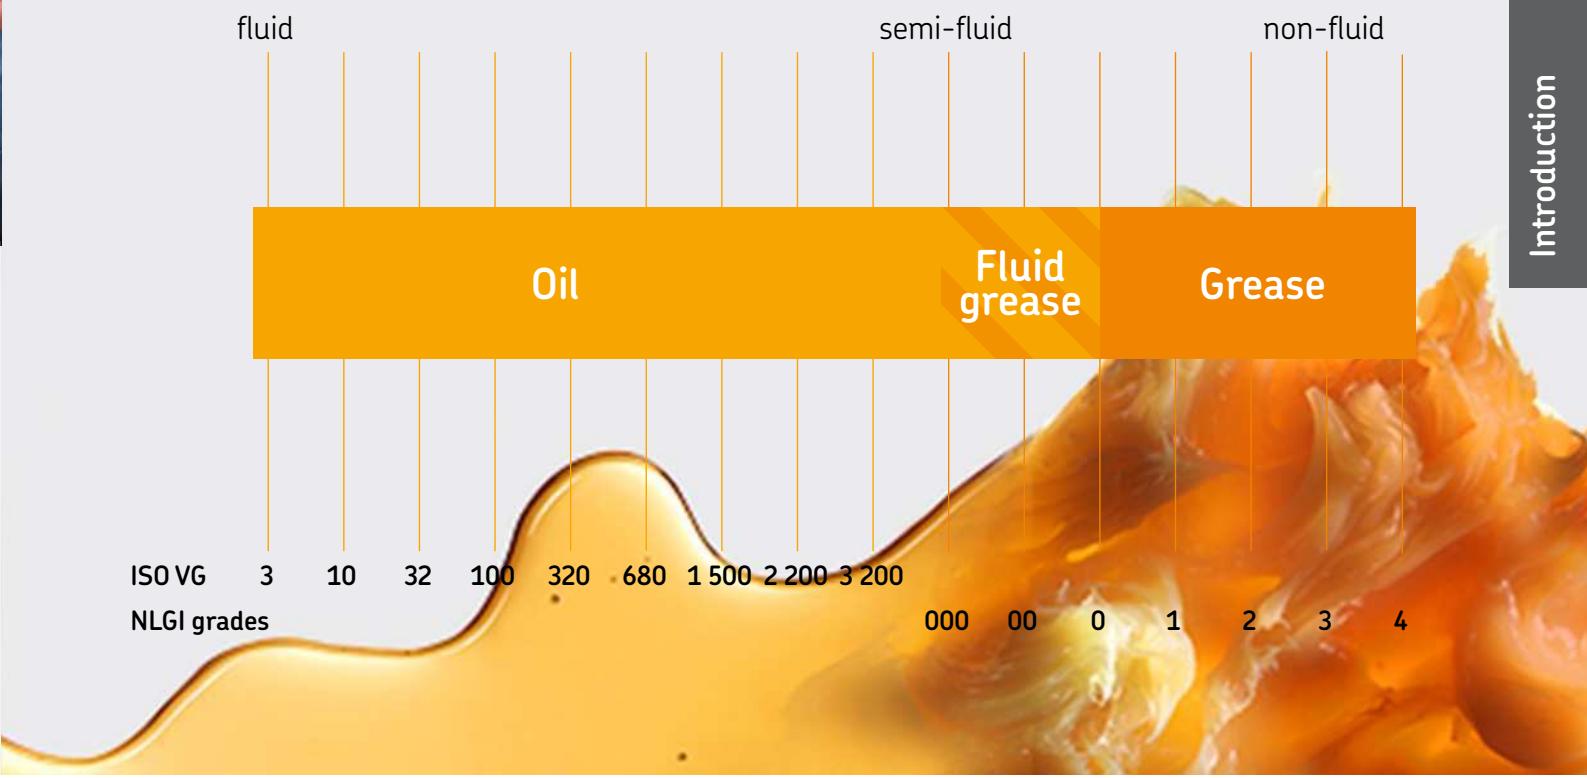

### Find your parts online

3D CAD data, technical drawings and data sheets of SKF automatic lubrication system components are now available in native format in the online parts library. In addition to enjoying easy CAD downloads, you can configure more complex lubrication system products and integrate them into your design process – completely free of charge. Integrate CAD data seamlessly into your layout plans without any delay.

## Lubricants suitable for lubrication systems

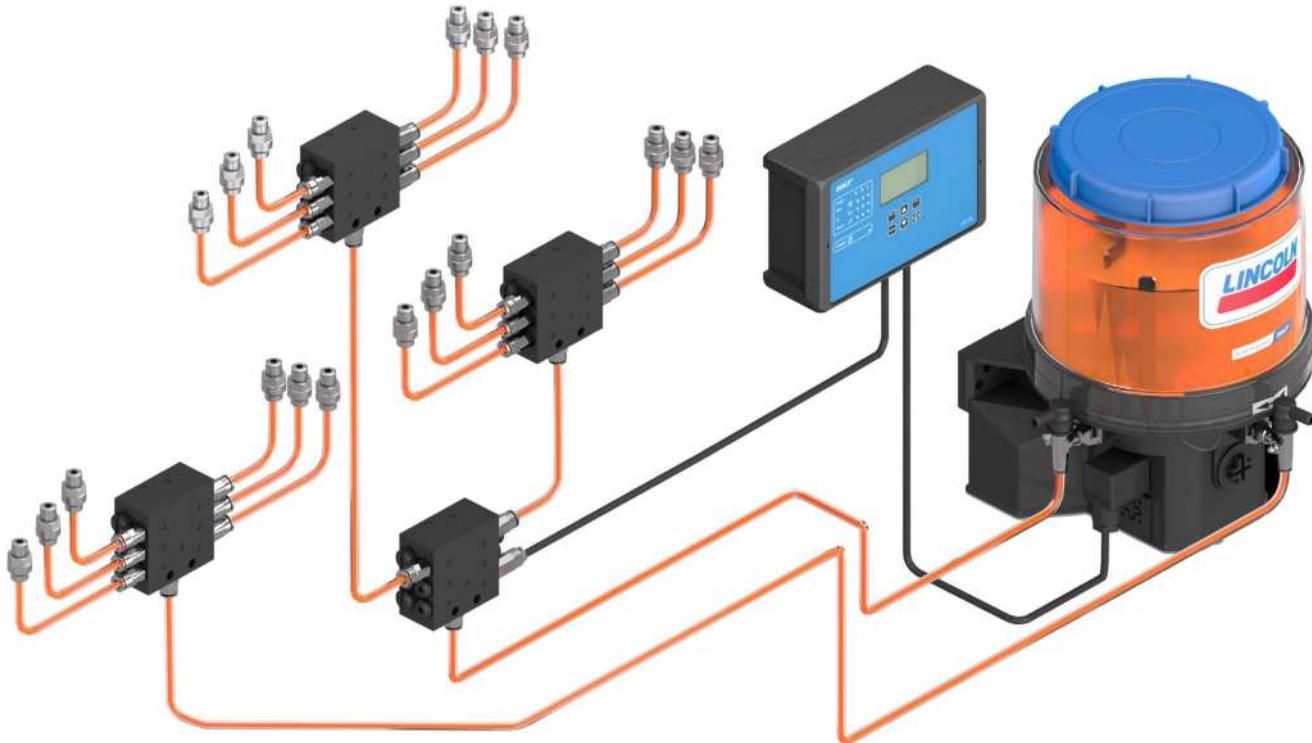

### Oil and fluid grease

The viscosity is an expression of a fluid's internal friction. Oils are classified in ISO VG viscosity classes from 2 to 3 200. NLGI grade 000, 00 and 0 greases are called fluid greases. Different types of oils are available, including mineral oils, organic oils and synthetic oils. A compatibility check is recommended prior to using any oil with SKF lubrication systems.

### Grease

Greases are consistent lubricants (NLGI grade 1–6). They are soft to hard, triple-component mixtures of a base oil as the lubricating fluid, a thickening agent and additives. In most instances, greases of NLGI grade 1 up to 3 are suitable for use in a lubrication system. A compatibility check should be made prior to using any grease with SKF lubrication systems.

# Progressive lubrication systems

## System description

SKF progressive systems, SKF ProFlex and Lincoln Quicklub, can be used on small- to medium sized machines with dispersed lubrication points that require varying lubrication quantities.

Progressive systems consist of a pump connected to at least one primary metering device. If needed, second level metering devices can be connected to the outlets of the primary metering device to increase the number of lubricated points, depending on operating pressure of the pump. The outlets of the primary and second level metering devices are connected via branch lines to the lubrication points of the machine. A third level of metering devices is not recommended. The pump supplies lubricant to the metering devices with pressure up to 550 bar (8 000 psi), depending on the pump model.

The metering devices split the lubricant into even or predefined amounts of lubricant, depending on metering device, that are positively displaced to the lubrication points or to the inlet of a connected secondary metering device. The lubricant amount provided by each outlet of the metering device depends on the type of metering device being used. SKF offers progressive systems that can dispense a precise, metered amount of lubricant to up to 150 lubrication points over distances of approximately 15 m (16 yd), depending on case values. For oil applications, even in connection with flow limiters we can cover distances over 100 m (110 yd), see also SKF Lincoln lubrication solutions portfolio brochure.

**Oil Circulation Systems.** SKF progressive systems provide continuous lubrication as long as the pump is in operation. Once the pump stops, the pistons of the progressive metering device will stop in their current positions. When the pump starts supplying lubricant again, the pistons will carry on where they left. Therefore, the progressive circuit of one outlet of the pump will stop when only one lubrication point is blocked. The blockage serves as a means of control and forces personnel to service the system. Only one outlet of a primary or a secondary metering device of one pump outlet can be monitored visually or electrically, depending on the chosen metering device.

For planning a lubrication system, conditions the system will be used in need to be determined first. The number of lube points, back pressures at the lube points, operating temperature range, lubricant, the feed pump's drive energy, control and monitoring etc. need to be defined correctly. Attention to information on bearing or lube point information need to be paid too. The sum of all the quantities metered out by the system's metering devices needs to be completed by safety margin and expansion and compressibility loss. SKF application engineers as well as SKF sales partners and distributors are experts in systems laying out lubrication according to all these specifications. A lubrication system layed out by SKF and partners ensures the supply of the correct amount of lubricant at the best time to lubricate. This reduces wear and it avoids pollution caused by over-lubrication.

## Applications

The systems are suitable for a variety of applications including: construction machines (concrete pumps, mortar pumps, loaders, excavators, trenchers); on-road trucks (snow removal, waste press); buses; agricultural machines (harvesters, balers, manure spreaders, sugar cane loaders); wood reclaimers; and material handling (reach stackers, crane carts). In addition, progressive lubrication systems are suitable for use in asphalt mixing plants, wind turbine generators and food and beverage facilities (fillers, washing machines), reciprocating compressors in the Oil and Gas industry, among many others.

SKF progressive systems are reliable and operate effectively in harsh conditions (inclusive ATEX) with potentially high lubrication-point back pressure, dirty, wet or humid environments and low temperatures.

## Overview of pumps and pump units

## Pump unit

### P 205

#### Product description

The P 205 high-pressure, multi-line pump can supply lubricant directly to lubrication points or can be used as a centralized lubrication pump in large-sized progressive systems. It can drive up to five elements, which are available in varying sizes for optimum adjustability. The pump's drive and eccentric shaft design, high-efficiency worm gear, minimal number of parts and multi-range motor provide several advantages. P 205 pumps are available with a three-phase flange mount and multi-range motor or with a free shaft end for use with other motors. Various gear ratios and reservoir sizes with or without level control are offered.

#### Features and benefits

- Durable, versatile and reliable pump series
- Suitable for grease or oil
- Designed for continual lubrication of machines and systems operating in harsh environments
- Broad range of output options
- Modular design and easy maintenance

#### Applications

- Stationary machines with a high lubricant consumption
- Turbines in hydro-electric power plants
- Needling machines
- Screens and crushers in quarries
- Material handling equipment

#### Technical data

## Pump unit

### P 203

#### Description

The P 203 lubrication pump is versatile, compact and economical and can supply up to 150 lubrication points, depending on the line length. It consists of a housing with integrated motor, reservoir with stirring paddle, pump element with pressure-relief valve, filling nipple and electrical connection parts. This powerful pump can drive up to three pump elements and can be equipped with a low-level control (with or without control board).

#### Features and benefits

- Optional control printed circuit boards with different operating settings
- Range of reservoir types offered
- For DC or AC applications
- Variety of pumping elements for different output available

#### Applications

- Small- and medium-sized machinery
- Combines, balers, forage harvesters
- Rotating applications (wind turbines)
- Mobile applications
- General industries
- Wheel loaders
- Excavators

#### Technical data

1) Selection based on typical and available P203 designs. Further customized versions are available on request.

2) Pumps are filled with following standard SKF Lincoln NLGI 2 grease quantities: 2L reservoir approx. 0,75kg / ≥ 4L reservoirs approx. 1,5kg grease

3) The stated nominal outputs per minute and pump element refer to NLGI 2 lubrication greases at an ambient temperature of + 20 °C [68 °F] and a backpressure of 100 bar [1450 psi] at the outlet of the pump element. Deviating operating conditions or deviating pump configuration result in a changed motor speed of 20 rpm and thus in a change of the output per time unit.

4) Integrated control board V10 factory setting: pause time 6h / lubrication time 6min. For further information, please see P203 manuals on SKF.com

## Accessories

# P 203

### Pump elements<sup>1)</sup>

1) Male thread M 22×1,5; female thread G 1/4

2) L5 only permitted for application of NLGI 00 lubrication grease

3) Pump element for supplying of chisel paste

4) With bypass check valve

5) For application in beverage industry

6) The stated nominal outputs per minute and pump element refer to NLGI 2 lubrication greases at an ambient temperature of + 20 °C [68 °F] and a pressure of 100 bar [1450 psi] at the outlet of the pump element. Deviating operating conditions or deviating pump configuration result in a changed motor speed of 20 rpm and thus in a change of the output per time unit.

### Return-line connector with filler fitting, screw type

| Order number | Description                | Filling nipple         | Thread         | Tube | Reservoir                | Ø mm |
|--------------|----------------------------|------------------------|----------------|------|--------------------------|------|
| Ø mm         |                            |                        |                |      |                          |      |
| 504-30698-1  | return-line connector      | straight               | R 1/4          | 6    | 2 l                      |      |
| 504-36071-5  | return-line connector      | straight, with adapter | R 1/4          | 6    | 2 l flat-type, 4 and 8 l |      |
| 504-36071-6  | return-line connector-line | 90°                    | R 1/4          | 6    | 2 l flat-type, 4 and 8 l |      |
| 304-16543-1  | adapter                    |                        | M 22×1,5×G 1/4 |      |                          |      |

### Reservoir conversion sets

| Order number                            | Designation  |
|---|--------------|
| Conversion set from 2 to 4 l reservoir: |              |
| 544-32787-1                             | 2XN to 4XN   |
| 544-32022-1                             | 2XN to 4XNBO |
| Conversion set from 2 to 8 l reservoir: |              |
| 544-32788-1                             | 2XN to 8XN   |
| 544-32023-1                             | 2XN to 8XNBO |

### Quick filling connector

| Order number | Description                        | Connection | Filter |

| 664-34167-9  | connection cable with bayonet socket (4/4 pole)    | 10    | 30 | IP 6K9K          |

<sup>1)</sup> The type of connection sockets and cable depend on the equipment of the pump. Please refer to the assembly instruction of the respective pump.

## Pump unit

# P 223/P 233

## Description

Similar to the P 203 series, the P 223/233 pumps feature an integrated control printed circuit board (P.C.B.) with metering device monitoring and can drive up to three pump elements. The P 233 provides supplementary Datalogger function for data transfer to Quickdata 2.0 diagnostic software. Versatile, compact and economical, the P 233 pump is enhanced with low-level control, printed circuit board MDF01/02 with attached Datalogger module and a keypad with display.

## Features and benefits

- Datalogger P 233 shows system settings and events including general data, pumping times, programming, operating times, malfunction and low-level indication
- Using Quickdata 2.0 diagnostic software, data can be read out via laptop and infrared interface

## Applications

- Mobile applications
- Track tamping machines
- Stationary systems
- Vehicles and construction machines

3) pump element for supplying of chisel paste

4) with bypass check valve

5) for application in beverage industry

6) The stated nominal outputs per minute and pump element refer to NLGI 2 lubrication greases at an ambient temperature of + 20 °C [68 °F] and a pressure of 100 bar [1450 psi] at the outlet of the pump element. Deviating operating conditions or deviating pump configuration result in a changed motor speed of 20 rpm and thus in a change of the output per time unit.

### Return-line connector with filler fitting, screw type

| Order number | Description                | Filling nipple         | Thread           | Tube | Reservoir                |

<sup>1)</sup> The type of connection sockets and cable depend on the equipment of the pump. Please refer to the assembly instruction of the respective pump.

## Pump unit

### KFG

#### Description

The electrically operated KFG pump includes a drive shaft with an eccentric that drives up to three pump elements. It is comprised of four main components: housing with pump elements, reservoir with fill-level monitoring, internal control units and attachments. The pump is available in eight sizes and two variants for stationary use or with grease follower plate technology for utilization in any position. A variety of attachments permit reservoir filling, protect the pump (pressure-limitation valve) or enable the uncomplicated connection of the pump to a centralized lubrication system.

#### Features and benefits

- Durable and reliable components designed for extreme conditions (with positively driven pump elements)
- Versatile; can be used with single-line and progressive systems
- Fill-level and lubrication system monitoring
- Pin code protection of control unit available

#### Applications

- On- and off-road vehicles
- Renewable energy (wind)

1) not available for rotary application version

- 2) Not available for rotary application version
- 2) only available for rotary application version

3) operating pressure 300 bar for spring return pump (200 bar for pump element E)

4) operating pressure 350 bar for positively driven pump (250 bar for pump element 1)

5) F,G,H,J,K,L: not for pump element E and L

(6) factory setting, other settings available

## Accessories

### KFG

#### Pump elements

Pump elements deliver the lubricant to the lubrication points or distributors through lubrication lines. Five pump elements for delivery rates of from 0,8 to 5,0 cm<sup>3</sup>/min are available for selection in two designs: with spring-return piston or with positively driven piston.

In many application instances, the pump element with spring-return piston is the correct choice. The pump element with positively driven piston was developed for use in extremely cold environments (up to -30 °C). or for high-viscosity lubricants. Up to three pump elements can be installed in the KFG pump unit. The possible attachment positions are located on the left, at the front and on the right on the pump housing. The lubricant outlet on the pump element has an M14x1.5 female thread for connecting lubrication lines or valves. If no pump element is installed, then the outlet of the pump housing is sealed with a screw.

#### Pressure relief valve

In order to prevent an excessive operating pressure in the system, a pivoted pressure relief valve should be attached. If the operating pressure exceeds the cracking pressure of the pressure restriction valve, then the valve will open and the lubricant can escape. The pressure restriction valve is used primarily in progressive systems. One can select among variants with SKF quick connectors, straight connector and with G1/4 female thread.

## Accessories

### KFG

#### Filling coupling set

One of the three lubricant outlets of the pump can, as an option, be equipped with one suitable filler socket instead of with one pump element, in order to fill the unit using a filling cylinder (cartridge).

A filling cylinder can also be optionally used to fill the pump unit through one of the lubricant outlets. To accomplish this, a filler socket must be configured in the order code in place of a lubricant outlet.

#### Filling coupling kit

As an alternative to a conical head nipple, the units for industrial or vehicle applications can also be equipped with a filler socket in order to fill it with a filling pump, e.g. the manual drum pump. A corresponding coupling socket and a hose socket must be mounted on the filling pump.

## Pump unit

### KFA

### Description

KFA series pumps include a maximum of two outlet ports to connect two independent lubrication circuits. A separate pump element is required for each outlet. Three pump elements with different delivery rates are available so that the volume of grease can be adjusted to individual circuit needs. This ensures that every lubrication point is supplied with an adequate amount of grease in each lubrication cycle. Model KFAS has an integrated IG502-2-1 control and monitoring unit that operates in a time- or load- (pulse) dependent mode, with or without monitoring..

### Features and benefits

Integrated control system provides:

- Non-volatile memory with PIN-code protection
- Storage of residual interval, lubricating cycle and faults signals
- Saved data in event of a power failure
- Connection for external pushbutton and inductive cycle switch
- Interval and contact times can be set independently
- Fits in tight/small places

### Applications

- Commercial vehicles
- Machine tools
- Printing industry

## Pump unit

### QLS 311 SSV

#### Description

The QLS 311 pump is a monitored lubrication system with low-level control for a maximum of 18 lubrication points. Designed for use with standard high-pressure plastic tubing, the QLS family includes pumps with or without mounted SSV metering devices. An optional integrated controller for pause and lubrication times is available.

#### Features and benefits

- Internal lubricant return possible
- Integrated pressure-relief valves
- External programming via keypad
- System monitoring with display of faults
- Standard low-level control
- Suitable for V AC and V DC versions
- Protection: IP 6K9K, NEMA 4

#### Applications

- Machine tools
- Metal processing
- Chain lubrication
- Material handling
- Automotive industry
- Food processing
- Printing industry
- Farm machinery

## Pump unit and accessories

### QLS 311 SSV

#### Identification code

P 3 1 1

#### Product design

##### SSV Metering devices

- 0 = external SSV 6, SSV 8<sup>1)</sup>
- 1 = external SSV 12, SSV 18<sup>1)</sup>
- 3 = SSV 6, rear-mounted
- 4 = SSV 8, bottom only
- 6 = SSV 12
- 9 = SSV 18

##### SSV metering device position

- 0 = without external metering device
- 1 = back, vertical order of lines
- 2 = bottom, horizontal order of lines<sup>2)</sup>

##### Operating voltage

- 2 = 12 V DC
- 4 = 24 V DC
- 6 = 120 V AC, only with control P.C.B.
- 8 = 230 V AC, only with control P.C.B.

##### Reservoir with low level control

- 1 = 1 l; 0.26 gal
- 2 = 2 l; 0.53 gal

##### Connections

- 0 = 1A – 1 connector, square-type plug, left, power supply
- 1 = 2A – 2 connectors, square-type plug, 1 connector left, power supply, 1 connector right, fault indication
- 2 = 1A – 1 connector, bayonet, left, power supply, fault indication, only for V DC application

##### Connection socket design

- 1 = square plug, design. For industrial applications<sup>3)</sup>
- 5 = bayonet plug 4-pole design, only V DC application. For vehicles<sup>4)</sup>

##### Electrical connector types

- 1 = with socket, without cable<sup>3)</sup>
- 5 = with socket, with cable (10 m, 33 ft)<sup>3)</sup>
- 7 = with bayonet socket, with cable (10 m, 33 ft), only for V DC application<sup>4)</sup>

##### Control printed circuit board (P.C.B.)

- 0 = none, only terminal board without time control, only for V DC application
- 4 = control P.C.B. S4:  
NC contact or NO contact, programmable: 1–5 cycles, only for V DC application
- 4 = control P.C.B. S4:  
NC contact or NO contact, programmable: 1 cycle with SSV 12, SSV 18; 1 to 3 cycles with SSV 6, SSV 8, only for V AC application

<sup>1)</sup> For external metering devices application only use the specific metering devices SSV...KNQLS

<sup>2)</sup> Do not use QLS 301 with SSV metering device in bottom-mounting position for mobile applications. Do not install the pump in areas exposed to shock.

<sup>3)</sup> Connection types 1, 5, 6 can be combined with square plug version (1) only

<sup>4)</sup> Connection types 7, 8 can be combined with bayonet plug version (5) only

#### Pump element and outlet accessories

## Pump unit

### QLS 301 SSV

#### Description

The Quicklub QLS 301 is a compact lubrication system designed to supply grease. The system package includes all necessary monitoring and control functions, as well as low-level control and a pressure-relief valve. Outlet connections and standard-pressure plastic tubing must be ordered separately. Up to 18 lubrication points can be supplied and monitored directly from the pump, and its reservoir features a follower plate, enabling rotating applications. The unit's integrated, all-in-one system concept reduces installation time and costs.

#### Features and benefits

- Back- or bottom-mounted progressive metering devices
- Internal lubricant return possible
- Integrated pressure-relief valve
- External programming via keypad
- System monitoring with display of faults
- Follower plate

#### Applications

- Machine tools
- Material handling
- Automotive industry
- Food processing
- Printing industry
- Renewable energies
- Farm machinery
- Construction

#### Technical data

## Pump unit and accessories

### QLS 301 SSV

#### Identification code

P301 1

#### Product design

##### Metering devices SSV

- |   |                                     |
|---|-------------------------------------|
| 0 = external SSV 6-KNQLS, SSV 8-KNQLS   | 4 = SSV 8, rear-mounted             |
| 1 = external SSV 12-KNQLS, SSV 18-KNQLS | 6 = SSV 12, rear- or bottom-mounted |
| 3 = SSV 6, rear-mounted                 | 9 = SSV 18, rear- or bottom-mounted |

##### Assignment of metering device outlets

- 0 = no metering device
- 1 = vertical metering device outlets, V, rear mounted
- 2 = horizontal metering device outlets, H, bottom-mounted<sup>1)</sup>

##### Operating voltage

- 2 = 12 V DC, available with or without control P.C.B.
- 4 = 24 V DC, available with or without control P.C.B.
- 6 = 120 VAC, only with control P.C.B.
- 8 = 230 VAC, only with control P.C.B.

##### Reservoir

- 1 = 1XL, 1 l; 0.26 gal, with low-level indication

##### Connection

- 0 = 1 connection left side:  
power supply (V DC / VAC) 1A, square plug. For industrial applications
- 2 = 1 connection left side:  
power supply (V DC) 1A, low-level or fault indication, bayonet plug. For vehicles only
- 1 = 2 connections:  
1× left side for power supply (V DC / VAC) 2A;  
1× right side for external low-level or fault indication, square plug. For industrial applications

##### Connection socket design

- 1 = square plug design A. For industrial applications<sup>2)</sup>
- 5 = bayonet plug 4-pole design. For vehicles<sup>3)</sup>

##### Electrical connector types

- 1 = with connection socket, without cable<sup>2)</sup>
- 5 = with connection socket and cable (10 m; 33 ft)<sup>2)</sup>
- 6 = with connection socket and ADR cable (10 m; 33 ft)<sup>2)</sup>
- 7 = with connection socket, bayonet and cable (10 m; 33 ft)<sup>3)</sup>
- 8 = with connection socket, bayonet and ADR cable (10 m; 33 ft)<sup>3)</sup>

##### Control printed circuit board (P.C.B.)

- 0 = without
- 4 = control P.C.B. S4; NC and NO contacts programmable 1-5 cycles; only for V DC application
- 4 = control P.C.B. S4; NC and NO contacts programmable; 1-3; only for VAC application

<sup>1)</sup> Not for use in areas with impact loads or vehicles

<sup>2)</sup> Connection types 1, 5, 6 can be combined with square plug version (1) only

<sup>3)</sup> Connection types 7, 8 can be combined with bayonet plug version (5) only

#### Pump element and outlet accessories

| Order number | Description  |
|--------------|--|
| 650-28856-1  | pump element K6  |
| 226-14091-4  | outlet push-in fitting with clamping ring;<br>check valve for hose with stud for Ø 6 mm tube |
| 504-30344-4  | outlet check valve assembly for Ø 6 mm tube  |
| 303-17499-3  | outlet closure plug with sealing edge  |

#### Accessories

| Order number | Description   |
|--------------|---|
| 664-36078-7  | cable kit, square plug black, cable (10 m, 33 ft);<br>4-core, grounding on pos. 180 |
| 664-36078-9  | cable kit, square plug black, cable (10 m, 33 ft);<br>4-core, grounding on pos. 0   |
| 664-34045-1  | cable kit, bayonet plug, cable (10 m, 33 ft) 4-core                                 |

## Pump unit

### QLS 401 SSV

#### Description

The Quicklub QLS 401 SSV is a complete lubrication system that includes all necessary monitoring and control functions, as well as a pressure-relief valve and an enhanced reservoir-stirring paddle that prevents grease separation. Outlet connections and standard-pressure plastic tubing must be ordered separately. Up to 18 lubrication points can be supplied via an SSV metering device with fixed output amount and can be monitored directly from the pump. The unit's integrated, all-in-one system concept reduces installation time and costs.

#### Features and benefits

- Back- or bottom-mounted metering devices
- Internal lubricant return possible
- Integrated pressure-relief valve
- External programming via keypad
- System monitoring with display of faults

#### Applications

- Industrial and mobile applications
- Food processing
- Farm machinery
- Machine tools

#### Technical data

## Pump unit

# QLS 401 SSVDV

## Description

The Quicklub QLS 401 SSVDV is a complete lubrication system that includes all necessary monitoring and control functions, as well as a pressure-relief valve and an enhanced reservoir-stirring paddle that prevents grease separation. Outlet connections and standard-pressure plastic tubing must be ordered separately. Up to 16 lubrication points can be supplied via an SSVDV metering device with adjustable output amount (using metering screws) and can be monitored directly from the pump. The unit's integrated, all-in-one system concept reduces installation time and costs.

## Features and benefits

- Back- or bottom-mounted metering devices
- Internal lubricant return possible
- Integrated pressure-relief valve
- External programming via keypad
- System monitoring with display of faults

## Applications

- Industrial and mobile applications
- Food processing
- Farm machinery
- Machine tools

## Pump unit

### QLS 421 SSV

#### Description

Designed for lubricating truck trailers and semi-trailers, the Quicklub QLS 421 is a complete lubrication system with an integrated metering device and controller, as well as a pressure-relief valve. The pump features a back-mounted SSV metering device and supplies grease only. Outlet connections and standard-pressure plastic tubing must be ordered separately. Up to 18 lubrication points can be supplied directly from the pump.

#### Features and benefits

- Compact progressive system
- Designed to supply grease
- Uses brake light as power supply via capacitor
- Lubricates at each braking until reaching set lubrication time

#### Applications

- Vehicles
- Trailers, semi-trailers
- Farm machinery
- Construction

## Pump unit

### P 502

#### Description

The P 502 is a simple, economical, electrically operated lubrication pump unit. It can provide directly a maximum of two individual lubrication points with lubricant or be connected to progressive metering devices. An integrated control board is available to set pause and lubrication time. Developed for fluid grease and grease, the P 502 features an optimized housing shape and reservoir suitable for food processing applications.

#### Features and benefits

- Economical operation
- Fits in tight/small places
- Flexible design for 12 and 24 V DC voltage supply
- Optional pressure-release valve
- Optimised housing design for splash zones in food processing

#### Applications

- Commercial vehicles
- Farm machinery
- Small construction machines
- Food and beverage industry

## Pump unit

### P 502

#### Pump elements

Pumps 502 can be equipped with a maximum number of 2 pump elements. The gasket is always included. Please observe the assembly instructions 951-171-009-EN when installing additional pump elements. It is also possible to remove pump elements. The remaining hole must be plugged by a closure plug.

Each pump element must be secured by a pressure relief valve. Nickel-plated pump elements are used in corrosive conditions such as food and beverage industry. Pump element B7 DN is suited for problematic greases which are tougher than standard greases.

600-26877-2

1) male thread M 22 x 1,5; female thread G 1/4

2) L only permitted for application of NLGI 00 lubrication grease

3)) pump element for supplying of chisel paste

4) with bypass check valve

5) for application in beverage industry

6) The stated nominal outputs per minute and pump element refer to NLGI 2 lubrication greases at an ambient temperature of + 20 °C [68 °F] and a pressure of 100 bar [1450 psi] at the outlet of the pump element. Deviating operating conditions or deviating pump configuration result in a changed motor speed of 9 rpm and thus in a change of the output per time unit.

## Return-line connector

The return-line connector is designed to feed grease quantities which are not required back into the pump reservoir (from a progressive metering device). It is installed in the mounting hole instead of a pump element.

#### Return-line connector with filler fitting, screw type

| Order number | Description   | Filling nipple            | Thread       | Tube |

## Pump unit

# CLP Basic/CLP Basic Plus

## Description

The pump series CLP (Compact Lubrication Progressive) is the first of the new SKF eLube generation. It works in small progressive lubrication systems. The lightweight, simple and easy-to-use pump stands out with its compact design and reliable functionality in mobile and industrial applications. To fit the specific needs of the applications, several electrical and monitoring features have been tailored. All CLP models are suitable for grease applications and come with a follower plate to support continuous grease flow. To refill the pumps easily, they are equipped with an easy-to-access standard grease nipple. The fill level can be visually monitored at each pump model. Basic Plus variants feature integrated empty-level monitoring that informs the user before the pump runs out of lubricant. Both Basic and Basic Plus variants can be controlled via an external lubrication controller or the machine control system. Basic Plus variants for mobile use come with a manual lubrication button to start an extra lubrication cycle. This helps to quickly check proper function of the system.

## Features and benefits

- Two mainline outlets with up to 3 cm<sup>3</sup>/min delivery rate each
- Designs for 12 and 24 V DC voltage supply
- Follower plate to support continuous grease flow
- Lightweight, simple to install and easy-to-use
- Easy-to-use and save bayonet plug for mobile use
- Proven square plug for industrial use
- Fits in tight/small places

## Applications

- Commercial vehicles, farm machinery
- Small construction machines
- Food and beverage industry

## Pump unit

### CLP

#### Pump elements

CLP pumps can be equipped with a maximum number of 2 pump elements. The gasket is always included. Please observe the assembly instructions 951-171-064-EN when installing additional pump elements. It is also possible to remove pump elements. The remaining hole must be plugged by a closure plug. Each pump element must be secured by a pressure relief valve. Nickel-plated pump elements are used in corrosive conditions such as food and beverage industry. Pump element B7 DN is suited for problematic greases which are tougher than standard greases.

600-26877-2

## Pump unit

# P 603 M

### Description

The compact P 603 M automatic lubrication pump consists of a housing with integrated motor, reservoir with stirring paddle, pump element with pressure-relief valve, filling nipple and electrical connection parts. It can drive up to three pump elements and operates according to a customer-supplied, external control unit (pause and lubrication times).

Versatile and economical, this pump can be enhanced with low-level control. The P 603 M can supply up to 100 lubrication points, depending on line length.

### Features and benefits

- Reservoir size up to 100 l (26.4 gal) available
- Powerful and robust pump
- Drives up to three pump elements
- C5M corrosion protection available
- Pump elements could be internally combined to one outlet
- CE, UL/CSA certified

### Applications

- Wind energy turbines
- Renewable energy
- Construction

## Pump unit

### P 623 M

#### Description

P 623 M electrically operated pumps have been designed to withstand electromagnetic pulses caused by lightning strikes. An extension of the P603 pump series, the P623 M is for use in progressive automatic lubrication systems. Working closely with customers to develop product solutions that meet specific needs, SKF developed the P623 M for onshore and offshore wind energy applications. In addition, these pump units are suitable for use in construction, mining and renewable energy applications where lightning protection must be considered. P623 M pumps feature a power supply board that transfers 230 V to 24 V (control) with overvoltage protection to discharge 8 KV (electric grounding). The pump units are available with a grease follower plate for rotating applications or a stirring paddle for stationary applications.

#### Features and benefits

- Reduces operational risk compared to standard automatic lubrication
- Offers higher safety standards
- Brings lubrication system into compliance

#### Applications

- Wind energy generators
- Construction, mining
- Renewable energies

## Pump unit

### P 653 M

#### Description

The compact P 653 M automatic lubrication pump consists of a housing with integrated motor, reservoir with stirring paddle, pump element with pressure-relief valve, filling nipple and electrical connection parts. It can drive up to three pump elements and operates according to a customer-supplied, external control unit (pause and lubrication times). Versatile and economical, this pump can be enhanced with low-level control that enables control of lubrication cycles. The P 653 M can supply up to 100 lubrication points, depending on line length.

#### Features and benefits

- Reservoir size up to 100 l (26.4 gal) available
- Powerful and robust pump
- Drives up to three pump elements
- C5M corrosion protection available
- CE, UL/CSA certified
- Pump elements could be internally combined to one outlet

#### Applications

- Wind energy systems
- Construction
- Renewable energies
- Etc.

## Pump unit

# ZPU 01/02

## Description

The ZPU 01/02 high-pressure, high-volume pumps can be used as a supply pump for small to midsize dual-line systems or for progressive systems.

Depending on the system layout, these electric pumps can supply lubricant within a 50 m (54 yd) radius at a maximum pressure of 400 bar (5 800 psi). Available with 10 or 30 l (2.6 or 8 gal) reservoirs, these units are compatible with oil and grease up to NLGI 2 (NLGI 3 upon request). Featuring one or two elements, the ZPU 01/02 pumps work effectively in a broad temperature range thanks to the integrated stirring device.

## Features and benefits

- Reliable
- Versatile
- Ultrasonic low- and high-level control options
- Free shaft end for use with other motors

## Applications

- Light to medium industrial applications
- Mixing machines
- Power plants
- Reclaimers
- Stackers

### Technical data

## Pump unit

### ZPU 01/02

## Pump unit

### EDL1

#### Description

The EDL1 is an easy-to-use, electrical pressure booster for sectional lubrication systems. High output pressure enables provision of lubricant from a single source to progressive metering devices and distant lubrication points with different lubricant requirements. Low input pressure of 2 bar (29 psi), allows for retrofit installations in existing systems. For operation of EDL1 an additional feeder pump is required.

#### Features and benefits

- Cost-effective solution
- Environmentally friendly; no need for pressurized air; can be driven by solar panels
- Virtually maintenance free
- User-friendly design and operation
- Flexible inlet and outlet positions
- Sends fault messages remotely
- Optional pressure switch available

#### Applications

- Food and beverage
- Wayside lubrication in rail applications
- Cement industry
- Other heavy industries

#### Technical data

## Pump unit

# E-PUMP

### Description

The electrical barrel pumping unit E-PUMP is a versatile barrel pump and it is especially designed for pumping oil or grease lubricants up to NLGI grade 2 into a centralized lubrication system. When equipped with a change-over valve unit, as E-VALV e.g. or a shut-off valve as E-VALVE-S e.g. it can be used either in single-line, dual-line or progressive lubrication systems. A complete pumping center consists of a pumping unit and a lid set. EPUMP-XXX-ECO coding is referring to ECO lid sets (descending pump head with follower plate), which are suitable for greases in NLGI grades 1 and 2 while EPUMP-XXX-STA coding is referring to STA lid sets (pump head always at barrel bottom), which are suitable for oil or greases in NLGI 0, 00 and 000 classes.

### Features and benefits

- E-Pump models reflecting typical and often used barrel sizes
- Compact electrically operated pump for applications where no air supply is available
- An internal pressure control and a heating element secure the pump's function in high-pressure conditions and cold climates

### Applications

- Heavy industries (paper, steel and other process industries)
- Mining and mineral processing
- Machinery workshops
- Food and beverage
- Cement industry

## Pump unit

# PPU-5/PPU-35

### Description

PPU-5 and PPU-35 are air-operated piston pumps designed to supply either oil or grease. They feature a spring-loaded piston that can be activated either by a 3/2-way or 4/2-way valve connection, which must be ordered separately. A reservoir (for grease only) can be connected to the pump via an intermediate plate or directly to the machine for a remote reservoir connection. Output can be modified via the adjusting screw.

### Features and benefits

- Compact pump for either grease and oil within progressive system
- Adjustable output via stroke setting screw
- Direct connect reservoir or remote connect reservoir possible
- Optional low-level control available, only with integrated reservoir
- Hydraulically operated version of pump available, see under hydraulic pumps

### Applications

- Small progressive systems
- Engine building
- Tube bending machines

## Pump

# 87214

## Description

The model 87214 pump is an air-operated, single-acting pump requiring a timer and three-way valve to control the cycles. Air pressure powers the piston on the delivery stroke, and a spring returns it to priming position. Depending on the type of reservoir used, the pump is suitable for both grease and oil applications. The 87214 pump requires a specially designed reservoir that must be ordered separately.

## Features and benefits

- Pump can be removed from reservoir without disturbing existing piping
- Inlet shut-off valve in reservoir base allows removal of pump without draining reservoir

## Applications

- Heavy-duty machinery
- Printing industry
- Metal cutting
- Metal forming
- Wood working and processing

## Accessories

#### Reservoir

#### Description

These reservoirs made of acryl are designed to be mounted directly onto the pump. They include all connections for air (or hydraulic oil, see hydraulically driven pump 87212, see p. 68) and lubricant outlet. They include a gauge 200 bar; 3 000 psi and an atmospheric indicator 62 bar; 900 psi.

## Pump

87200/87216/130179

### Description

SKF's modular pumps are designed to efficiently supply either grease or oil in automatic systems using progressive metering devices. Models 87200, 87216 and 130179 are air-operated pumps that must be equipped with an appropriate baseplate and reservoir to make up a pump assembly. Baseplates contain all inlet and outlet connections for the pump and lubrication system and allow for quick pump removal without disturbing any existing piping. Removal of the pump does not require draining of the reservoir due to an integral check valve in the baseplate. Pump cycles will be controlled by a timer in conjunction with a three-way valve (supplied separately).

### Features and benefits

- No dismantling of piping when removing pump
- No draining required due to integral check valve in baseplate
- Precise adjustability of output

### Applications

- Small progressive systems
- Printing industry, material handling
- Metal processing

**NOTE**

 2) Reservoirs include 1/2 NPTF (F) outlet  
 3) Includes visual level indicator rod

## Pump unit

### PP / PPG

#### Description

PP pumps are air-operated, single-stroke pumps that require a 3/2-way air valve to activate the air cylinder. Designed to supply grease through one outlet, the pumps are equipped with a spring-loaded follower plate and an indicator rod for level control purposes. Suitable for indoor/outdoor applications, PP pumps have one outlet and can be used with a primary progressive metering device or with a secondary-level metering device. In comparison to the PP pumps, PPG devices include an integrated metering device with eight outlets, enabling their use as small, air-operated progressive systems.

#### Features and benefits

- Compact, air-operated units for up to 100 lubrication points
- Indicator rod for level control available
- Unique port arrangements possible (PPG)
- Internal return of grease into reservoir (PPG)
- Simple refilling from grease pail

#### Applications

- Spinning machines
- Die-cutting machines
- Beverage processing
- Small presses
- Machine tools
- Handling equipment

## Pump unit

# PFP-23-2/PFP-23-22

## Description

PFP-23-2 and PFP-23-22 are air-operated grease pump units that include a reservoir and follower plate under atmospheric pressure. These pumps are made for small-sized progressive systems or for use as multi-line pumps. The output of one lever stroke is divided by two when using two outlets. A return line to the reservoir is available. Also the pump is equipped with a filling coupler to refill the pump.

## Features and benefits

- Small, compact, air-operated pump
- Up to 190 bar (*2 755 psi*) operating pressure
- Port for return line is available on pump
- Refill by grease coupling avoids contamination of grease
- Available with one or two outlets

## Applications

- Small- and medium-sized machines
- Applications with air power supply
- Especially for indoor applications
- Die-cutting machines
- Small presses

## Pump unit

### MPB

#### Description

The MPB pump unit is especially designed for automatic lubrication systems. The unique feature in it compared to traditional air-operated barrel pump with mechanical air motor valve is its magnetically operated air motor valve. This will reduce the amount of mechanical components in the air motor and also eliminates the need of lubrication in the air motor. The pump is suitable for use with 18, 50 and 180 kg (40, 120 and 400 lb) lubricant barrels. And when equipped with a suitable adapter MPB pump unit can also be used in lubricant bulk containers.

#### Features and benefits

- Lubrication-free, electronically controlled air motor enables accurate control of pump output
- Fewer mechanical components extend a service life of the air motor
- Includes self-diagnosing system
- Operates effectively in wide range of temperatures
- IP 65 protection rating

#### Applications

- Paper industry
- Steel industry
- Heavy industry

#### Technical data

## Pump unit

# 87212

## Description

The model 87212 pump is a hydraulically operated, single-acting pump with a double-acting, hydraulic cylinder that requires a four-way valve and timer for operation. Hydraulic pressure powers the piston on the delivery stroke and returns it to priming position. Depending on the type of reservoir used, the pump is suitable for both grease and oil applications. The 87212 pump requires a specially designed reservoir that must be ordered separately.

## Features and benefits

- Pump can be removed from reservoir without disturbing existing piping
- Inlet shut-off valve in reservoir base allows removal of pump without draining reservoir

## Applications

- Small progressive systems
- Foundry machinery
- Material handling
- Metal cutting

### Reservoir

### Description

These reservoirs made of acryl are designed to be mounted directly onto the pump. They include all connections for air (or hydraulic oil, see hydraulically driven pump 87212) and lubricant outlet. They include a gauge 200 bar; 3 000 psi and an atmospheric indicator 62 bar; 900 psi.

<sup>1)</sup> For air supply and lubricant outlet

## Pump unit

# 87202

### Description

87202 modular pumps are designed to efficiently supply grease or oil in automatic systems using metering valve metering devices. These hydraulically operated pumps must be equipped with an appropriate baseplate and reservoir to make up a pump assembly. Baseplates contain all inlet and outlet connections for the pump and lubrication system. Pump cycles will be controlled by a timer in conjunction with a four-way valve (supplied separately).

### Features and benefits

- No dismantling of piping when removing pump
- No draining required due to integral check valve in baseplate
- Precise adjustability of output

### Applications

- Small progressive systems
- Metal forming
- Metal cutting

<sup>3)</sup> Includes visual level indicator rod

## Pump unit

# PHU-5/PHU-35

## Description

PHU-5 and PHU-35 are hydraulically operated piston pumps for progressive systems. They are designed to supply either oil or grease. The pumps feature a spring-loaded piston that can be activated either by a 3/2-way or 4/2-way valve connection, which must be ordered separately. A reservoir can be connected to the pump via an intermediate plate or directly to the machine for a remote reservoir connection. Pump output can be modified via the adjusting screw.

## Features and benefits

- Compact pump for either grease and oil
- Adjustable output via stroke setting screw
- Direct connect reservoir or remote connect reservoir possible
- Optional low-level control available, only with integrated reservoir
- Air operated version of pump available

## Applications

- Small progressive systems
- Small presses

## Pump unit

# PFH-23-2/PFH-23-22

## Description

PFH-23-2 and PFH-23-22 are hydraulically operated grease pump units that include a reservoir and follower plate under atmospheric pressure. These pumps are suitable for small-sized progressive systems or for use as multi-line pumps. When using two outlets, the output of one lever stroke is divided by two.

## Features and benefits

- Small, compact, hydraulically operated pump
- Up to 200 bar ( $2\,900\text{ psi}$ ) operating pressure
- Pump port for return line is available
- Refilling via grease coupling avoids grease contamination
- Available with one or two outlets

## Applications

- Small- and medium-sized machines
- Applications with hydraulic power supply
- Especially for indoor applications
- Die-cutting machines
- Small presses

## Pump unit

### BPH

#### Description

The hydraulically operated barrel pump series BPH offers all features needed to run the machine without unplanned interruptions. Constructed of heavy-duty material, the pump works reliable in demanding applications, including excavators, loaders, haul trucks and other heavy machinery in construction and mining environment. Featuring a fully encased pump head, damages during tough operation become less likely. The compact design allows to mount the pump even in applications, where space is limited. While hindering fluids to leak, the three-sealing-package provides the extra step to safe and reliable operation. In addition, it minimizes the risk of contamination of hydraulic oils as well as environmental concerns. Flow rate and reverse pressure can be adjusted to fit the application needs. Built-in sensors monitor oil pressure, temperature and piston movement helping to avoid malfunction prior the event.

#### Features and benefits

- Innovative sealing concept to avoid hydraulic oil and lubrication grease leakage
- Three possible outlet directions, front, left and right
- Compact and robust design for demanding applications
- Optional monitoring sensors for increased reliability

#### Applications

- Construction machinery
- Mining machinery

1) Basic pump versions include:

- Corrosion class C3
- Suction tube 01 for drum size 55 gal / 208 liter
- Adjustable reverse pressure 30–60 bar (435–870 psi)
- Inlet connection GE12-L thread G3/8A – tube Ø12
- Front outlet direction
- Outlet connection thread 3/4" – 1/4 NPTF
- Optical leakage signal
- Function monitoring control with pressure gauge

## Pump unit

### MCLP

#### Description

MCLP pumps are designed to supply oil under high pressure to a distribution circuit of progressive metering devices connected downstream. They include two main parts – the MCLP gearbox containing the lubrication oil and the MCLP pump heads. The gearbox can hold up to two pump heads. By the action of a cam in the gearbox, the pump plunger is pushed upward on the delivery stroke and returned to priming position by the plunger return spring. The cam can be actuated by an electrical motor or by connection to a machine. The cam of all pump models has a single lobe for pump head actuation.

#### Features and benefits

- Two sizes of pump heads available
- Fully adjustable output
- Driven by machine or electric motor (supplied separately)
- Various gear ratios available

#### Applications

- Applications with high pressure
- Natural gas engines
- Refineries
- Compressors

#### Technical data

### MCLP pump inlet filter

### MCLP pump inlet filter

This MCLP pump inlet filter serves two pump heads. It filters the oil, from the header tank, before entering the pump heads with filter size 10 µm.

### MCLP pump inlet filter

| Order number | Inlet   | Inlet pressure max. |
|--------------|---------|---------------------|
|              | NPTF(F) | bar      psi        |
| 130067       | 1       | 3,5      50         |

### MCLP pump heads

### In-line filter

Filter used at the outlet of the pump heads to remove solid contaminants before delivering lubricants to the supply line. Uses filtering element size 10 µm. Has a hexbody size 1 1/4 in and includes FKM seal.

### In-line filter

| Order number | Inlet   | Inlet pressure max. |
|--------------|---------|---------------------|
|              | NPTF(F) | bar      psi        |
| 84239        | 1/4     | 415      6 000      |

### MCLP no-flow valve

### No-flow valve

The no-flow valve monitors by sensing the flow of lubricant, eliminating the need for explosion-proof electrical components when used in hazardous locations. This valve actuates a three-way valve that diverts or exhausts the air supply to provide an air-operated signal or engine shutdown.

### No-flow valve

| Order number | Operating pressure max. | Air supply max.        |
|--------------|-------------------------|------------------------|
|              | bar                     | psi                    |
| 87862        | 415                     | 6 000      10      150 |

## Pump unit

# HP / HPG

## Description

The manually operated single-stroke lever pump HP is designed for use in progressive systems to supply grease through one outlet. They are equipped with a spring-loaded follower plate and an indicator rod for level control purposes. The pumps can be used with a primary progressive metering device only or also with a secondary-level metering device. Similar to HP pumps, HPG pumps include a special integrated progressive metering device with eight outlets. Therefore, the HPG are suitable for small manually operated progressive systems.

## Features and benefits

- No power supply necessary
- Ease of use
- HPG with integrated progressive metering device, serving up to 8 lubrication points
- HPG15 pumps refillable via filling nipple
- Level control via indicator rod

## Applications

- Applications without power supply
- Indoor use
- Excenter presses
- Slurry centrifuges

## Pump unit

# HP-500W/HP-500W-SSV

## Description

The manually operated, single-stroke HP-500W pump is designed to be affixed vertically on a wall. The pump can supply grease directly to lubrication points or can be connected to progressive metering devices for an even supply of lubricant.

The HP 500W-SSV version of the pump features an integrated metering device with various outlet numbers. Both models may be used with bulk grease or with standard 400 g (0.88 lb) cartridges.

## Features and benefits

- Uses standard cartridges
- No electrical power supply necessary
- Refillable bulk reservoir
- Easy to use
- Available with or without integrated metering device

## Applications

- Applications without power supply
- Indoor use
- Printing industry
- Punching machines
- Planing machines

## Pump unit

# PF-VPBM/169-000-146

## Description

The manually operated PF-VPBM pump was developed to supply lubricant from a grease cartridge. Equipped with an integrated metering device, the easy-to-use pump is suitable for applications requiring a compact progressive system. Its size can vary from six to 12 outlets that supply even amounts of lubricant.

The PF-VPBM version of the pump features an integrated metering device with various outlet numbers. Both models may be used with bulk grease or with standard 400 g (0.88 lb) cartridges.

## Features and benefits

- Reliable, user-friendly pump
- Utilizes grease cartridges for convenience
- Varying number of outlets available

## Applications

- Farm machinery
- Small stackers
- Construction machinery
- Motor vehicle superstructures

## Pump unit

### HJ 2

#### Description

The manually operated HJ 2 pump unit was developed to provide lubricant to points that do not require continuous lubrication. Comprised of two supply pistons and a 3 liter (0.8 gal) reservoir with an integrated stirring device, this robust pump unit operates effectively, even at low temperatures. Operating pressure is 300 bar (4 350 psi).

#### Features and benefits

- Suitable for use with dual-line or progressive systems
- Dispenses greases up to NLGI 3
- Available with left- or right-hand levers

#### Applications

- Metal forming
- Roll straighteners
- Tire heating presses
- Harbor cranes

## Pump unit

# PF-23-2/PF-23-22

### Description

PF-23-2 and PF-23-22 are manually operated grease pump units that include a reservoir and follower plate under atmospheric pressure. These pumps are made for small-sized progressive systems or for use as multi-line pumps. When using two outlets, the output of one lever stroke is divided by two. A return line to the reservoir is available. Also, these pumps are equipped with a filling coupler for replenishing the reservoir.

### Features and benefits

- Small, compact, manually operated pump
- Up to 100 bar operating pressure
- Pump inlet for return line is available
- Refilling via grease coupler avoids grease contamination
- Available with one or two outlets

### Applications

- Small- and medium-sized machines
- Applications where no power supply is available
- Especially for indoor applications
- Excenter presses
- Punching machines

## Metering device

### SSVM

#### Description

SSVM type metering device is a compact single block progressive piston-type metering device. For direct mount of fittings with no need of any sealing in-between. Specially designed for small output needs, small spaces due to its small dimensions and short distances. Available with pin indicator for visual system monitoring.

#### Features and benefits

- Small and compact size for applications where space is restricted
- Internal combining of outlets
- Exact lubricant metering
- Available with visual pin indicator

#### Applications

- Printing industry
- Wood processing machines
- Material handling machines

#### Technical data

| 226-14091-5  | RV 6511-4-M8x1-S02<br>valve body with clamping ring | brass, nickel-plated | 4    | plastic tube |

## Metering device

### SSVD

#### Description

SSVD type metering device is a compact single block progressive metering device with adjustable output by means of different metering screw sizes. The screw meters the output for a pair of outlets (opposite outlets). For direct mount of fittings with no need of any sealing in-between. It is a versatile metering device available in many variants regarding type of monitoring or surface treatment.

#### Features and benefits

- Ten different metering screw sizes available
- Optionally visual or electrical monitoring
- Nickel plated surface treatment for corrosive environment available
- Ideal for use as primary metering device

#### Applications

- Construction and mining
- Farm machinery
- Industrial equipment

#### Technical data

|                       |   |
|-----------------------|---|
| Function principle    | block metering device   |
| Operating temperature | -25 to +70 °C;<br>-13 to +158 °F  |
| Operating pressure    | max. 350 bar; 5 075 psi   |
| Outlets 1)            | 6 to 22   |
| Lubricant             | grease:<br>oil:   |
| per cycle and outlet: | up to NLGI 2<br>at least 40 mm <sup>2</sup> /s  |
| Connection inlet      | min. 0,08 cm <sup>3</sup> ; 0,0042 in <sup>3</sup>  |
| Connection outlet 3)  | max. 1,80 cm <sup>3</sup> ; 0,11 in <sup>3</sup>  |
| Material              | G 1/8 or 1/8 NPTF   |
| Dimensions            | M10×1<br>black chromated steel<br>or nickel plated<br>min. 70 × 60 × 40 mm<br>max. 190 × 60 × 40 mm<br><i>min. 2,75 × 2,36 × 1,57 in</i><br><i>max. 7,48 × 2,36 × 1,57 in</i> |
| Mounting position     | any   |

1) By crossporting or closing outlets possible to reduce outlet number below given minimum.  
Outlet #1 and #2 should never be closed

2) Depending on metering screw valid for a pair of opposite outlets  
3) Use special SSVD outlet fittings

## Metering device

### SSVDL

#### Description

SSVDL type metering device is a single block progressive metering device with larger tube diameters especially for heavy industry applications. Available with pin indicator for visual system monitoring or with piston detector for electrical system monitoring. Outlet combining elements for 2, 3, 4 and 5 outlets available.

#### Features and benefits

- Similar to SSVD but with larger distances between the outlets for larger tube diameters
- Sizes 6 to 14 outlets
- High operating pressure
- Exact lubricant metering
- Optionally equipped with visual monitoring pin or with electrically monitored piston detector

#### Applications

- Heavy industry

#### Technical data

|   |  |
|---|--|
| Function principle                      | block metering device  |
| Operating temperature                   | -25 to +75 °C;<br>-13 to +167 °F   |
| Operating pressure                      | max. 350 bar; 5 075 psi  |
| Outlets <sup>1)</sup>                   | 6 to 14  |
| Lubricant                               | up to NLGI 2   |
| grease:                                 | minimum 40 mm <sup>2</sup> /s  |
| oil:                                    |  |
| Metering quantity per cycle and outlet: | min. 0,08 cm <sup>3</sup> ; 0,0042 in <sup>3</sup><br>max. 1,80 cm <sup>3</sup> ; 0,11 in <sup>3</sup>     |
| Connection inlet                        | R1/4   |
| Connection outlet                       | 8,10 or 12 mm  |
| Material                                | black chromated steel  |
| Dimensions                              | min. 110 × 60 × 50 mm<br>max. 230 × 60 × 50 mm<br>min. 4.33 × 2.36 × 1.97 in<br>max. 9.05 × 2.36 × 1.97 in |
| Mounting position                       | any  |

<sup>1)</sup> To ensure metering device operation outlet 1 and 2 should never be closed by a closure plug

## Metering device

# SPVS

### Description

Block type metering devices of the SPVS series are used to either increase the number of outlets of a lubricating pump or to portion the volume flow and deliver it to the lube points, without any influence on the operating system pressure.

### Features and benefits

- Compact design
- Compact two piston version with mechanical interlock, prevents selfblockage
- Universally usable for oil and grease
- Central function monitoring with electrical stroke monitoring device possible
- Accurate lubricant distribution due to fitted pistons

### Applications

- Metal forming machines
- Small machinery
- Packaging machines

## Metering devices

### VPB

#### Description

VPB type metering devices are compact single-block progressive metering. Available with pin indicator for visual system monitoring or with piston detector for electrical system monitoring.

#### Feature and benefits

- Robust and cost-efficient
- Available in metric and inch design
- Optional visual or electric monitoring
- Internal crossporting possibility, use of standard tube fittings
- Variety of material as zinc coated or stainless steel available

#### Applications

- Metal forming machines
- Vehicles
- Production machines of automotive industry
- Packaging machines
- Printing industry
- Farm machinery
- Construction and mining

## Metering device

### SSV

### Description

SSV are single block progressive metering devices that reliably divide the incoming lubricant in predetermined individual quantities. SSVs can be used with high backpressures, and they are ideally suitable for a wide range of temperatures. The maximum operating pressure is 350 bar. SSV metering devices are available with 6 to 22 outlets. Monitoring is possible via pin indicator for visual system monitoring or with piston detector for electrical system monitoring.

### Features and benefits

- Sizes up to 22 outlets
- High operating pressure
- Available in different materials
- Exact lubricant metering
- Unique internal crossporting technology
- Optionally equipped with visual monitoring pin or with electrically monitored piston detector

### Applications

- Construction and mining
- Farm machinery
- Industrial equipment
- Renewable energies

## Metering device

### SSVL

#### Description

SSVL type metering device is a single block progressive metering device with larger tube diameters especially for heavy industry applications. Available with pin indicator for visual system monitoring or with piston detector for electrical system monitoring. Outlet combining elements for 2, 3, 4 and 5 outlets available.

#### Features and benefits

- Similar to SSV but with larger distances between the outlets for larger tube diameters
- Sizes 6 to 14 outlets
- High operating pressure
- Exact lubricant metering
- Optionally equipped with visual monitoring pin or with electrically monitored piston detector

#### Applications

- Heavy industry
- Construction machinery
- Vehicles

#### Technical data

|                       |   |
|-----------------------|---|
| Function principle    | block metering device   |
| Operating temperature | -25 to +75 °C;<br>-13 to +167 °F  |
| Operating pressure    | max. 350 bar; 5 075 psi   |
| Outlets 1)            | 6 to 14   |
| Lubricant             | grease:<br>oil:   |
| grease:               | up to NLGI 2  |
| oil:                  | at least 40 mm <sup>2</sup> /s  |
| Metering quantity     | per cycle and outlet:<br>0,2 cm <sup>3</sup> ; 0.12 in <sup>3</sup>                                       |
| Connection inlet      | R 1/4   |
| Connection outlet     | 8, 10 or 12 mm  |
| Material              | black chromated steel   |
| Dimensions            | min. 90 × 60 × 40 mm<br>max. 210 × 60 × 40 mm<br>min. 3.54 × 2.36 × 1.57 in<br>max. 8.26 × 2.36 × 1.57 in |
| Mounting position     | any   |

<sup>1)</sup> To ensure metering device operation outlet 1 and 2 should never be closed by a closure plug

#### NOTE

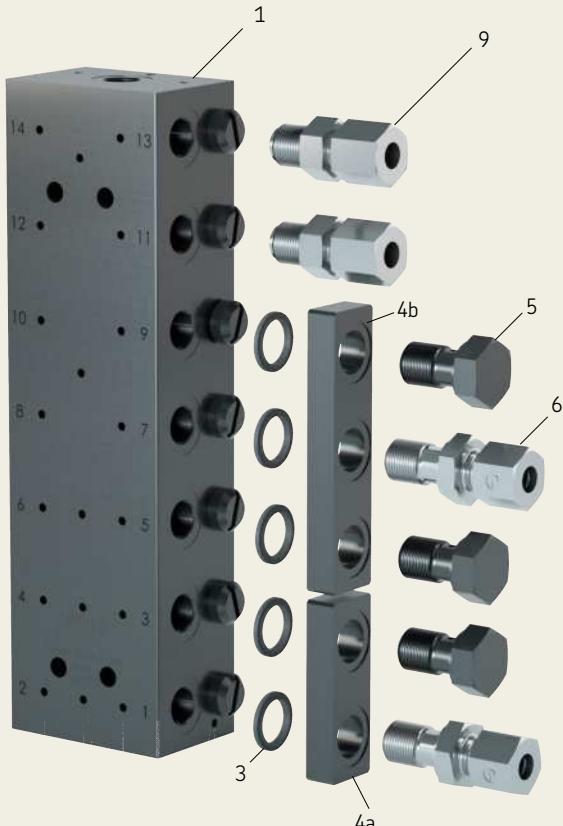

Further technical information, technical drawings, accessories, spare parts or product function descriptions are available on [SKF.com/lubrication](http://SKF.com/lubrication).

## Metering device

### VPK

#### Description

The VPK type metering device is a sectional metering device. Its metering sections cover a metering volume per outlet and cycle of  $0,05 \text{ cm}^3$  (T-section = 2 outlets) to  $0,6 \text{ cm}^3$  (S-section = 1 outlet). All sections (inlet, intermediate, end) are tightened via tie rods. The delivery ducts are sealed by porting plates in-between the segments. A minimum of three intermediate sections is necessary.

#### Features and benefits

- Volumetric flow of up to  $500 \text{ cm}^3/\text{min}$ ;  $30.5 \text{ in}^3/\text{min}$
- Universal use in continuous or intermittent operation
- Metering sections with variable metering amount
- Internal consolidation of outlets
- Visual or electrical monitoring optional
- Safe sealing concept with porting plates

#### Applications

- Metal forming machines
- Vehicles
- Production machines of automotive industry
- Packaging machines
- Printing industry
- Construction and mining
- Farm machinery

#### Technical data

### Universal and bipolar piston detector

The universal and bipolar piston detectors are position sensors that are screwed into the metering device together with the relevant pressure-resistant adapter. The sensors detect the piston by means of the closed adapter without coming into direct contact with it. They adjust themselves independently after several distribution strokes. Therefore, hydraulic pressure peaks do not act directly on the frontal sensor surface of the piston detectors.

#### Kit, with piston detector, O-ring and adapter

| Order number | Description | Material        |
|--------------|-------------|-----------------|
| 24-0159-6022 | bipolar     | stainless steel |
| 24-0159-6024 | universal   | stainless steel |

## Metering device

### VP

#### Description

The VP type metering device is a sectional metering device. Its metering sections cover a metering volume per outlet and cycle of 0,1 cm<sup>3</sup> (T-section = 2 outlets) to 1,2 cm<sup>3</sup> (S-section = 1 outlet). All sections (inlet, intermediate, end) are tightened via tie rods. The delivery ducts are sealed by porting plates in between the segments. A minimum of three intermediate sections is necessary.

#### Features and benefits

- Volumetric flow of up to 1,0 l/min; 61 in<sup>3</sup>/min
- Universal use in continuous or intermittent operation
- Metering sections with variable metering amount
- Internal and external consolidation of outlets
- Visual or electrical monitoring optional
- Ideal as main metering device
- All outlets with built-in, non-return valves

#### Applications

- Preferred master metering device
- Metal forming machines
- Vehicles, trucks
- Construction and mining
- Packaging machines
- General industry
- Farm machinery

#### Technical data

- 1) The installation of the cycle indicator is only possible for size 2 and bigger.
- 2) Solderless pipe unions with cutting sleeve acc. to DIN 2353
- 3) L-series = light version, S-series = heavy-duty version
- 4) Repeat this entry according to number of selected sections (1 to 10)
- 5) Metering device only operates with maximum one side (left or right) outlet closed per section

### Crossporting bars

Crossporting bars are used to combine adjacent outlet ports. They are screwed into the lateral outlet ports or, if on hand, into the upper alternative outlet ports.

### Crossporting bars

| Order number | Description                           |
|--------------|---------------------------------------|
| VP-C         | VPM crossporting bridge for 2 outlets |
| VPG-C        | VPG crossporting bridge for 2 outlets |

### Universal and bipolar piston detector

The universal and bipolar piston detectors are position sensors that are screwed into the metering device together with the relevant pressure-resistant adapter. The sensors detect the piston by means of the closed adapter without coming into direct contact with it. They adjust themselves independently after several distribution strokes. Therefore, hydraulic pressure peaks do not act directly on the frontal sensor surface of the piston detectors.

### Kit, with piston detector, O-ring and adapter

| Order number | Description | Material        |
|--------------|-------------|-----------------|
| 24-0159-6022 | bipolar     | stainless steel |
| 24-0159-6024 | universal   | stainless steel |

## Metering device

# PSG1

## Description

The PSG 1 is a progressive metering device consisting of a baseplate and different metering sections that can be individually combined for specific outlet ratios and cross portings. The ports are part of the baseplate, so that connectors and tubes remain in place when segments need to be changed.

## Features and benefits

- Easy servicing as outlets are located on baseplate
- Flexible due to exchangeable metering segments
- Visual or electrical monitoring possible
- Dummy segments with no output available
- Adjustable by consolidating outlets internally or externally

## Applications

- Automobile presses
- Paper machines
- Tunnel boring machines

| 2    |       |
| 1    |       |

1) Only on 300 and 350 mm<sup>3</sup> section sizes

- 1) Only on 200 and 250 mm<sup>3</sup> section sizes
- 2) Installation on first or last section is not recommended

3) Solderless pipe union with cutting sleeve per DIN 2353

4) The volume per section is equal on both sides

- 5) If possible, do not place in first position when designing metering device

6) Metering device only operates with one side (left or right) outlet closed per section

## Metering device

### PSG2

#### Description

The PSG2 is a progressive metering device consisting of a baseplate and different metering sections that can be individually combined for specific outlet ratios and cross portings. The ports are part of the baseplate, so that connectors and tubes remain in place when segments need to be changed.

#### Features and benefits

- Easy servicing due to outlet location
- Flexible with exchangeable metering segments
- Visual or electrical monitoring available
- Increased corrosion-resistant material offered
- Adjustable output by consolidating outlets internally or externally

#### Applications

- Automobile presses
- Tunnel boring machines
- Paper machines

## Metering device

### UV

### Description

UV metering devices are modular type metering devices. They consist of a baseplate part and a metering sections part. The baseplate has one inlet, three to eight intermediate, one end section held via three tie rods. The metering sections part consists of three to eight metering sections (depending on number of outlets needed) which are fixed on the baseplate part. All parts have FKM O-ring seals in-between. There must be a minimum of three metering sections. The metering sections will have either single or twin outlets. Whenever a single metering segment or crossport plate is used, the unused outlet must be plugged. Metering device has to be ordered in single parts, see chart.

### Feature and benefits

- Alternate outlet ports for performance indicators
- Optional metering sections with visual cycle indicator
- Optional by-pass metering segment for addition or deletion of lubrication points

### Applications

- Industrial machinery
- Metal forming machines
- Material handling machines

#### Technical data

#### Description

Closure plug to plug non-working outlets. External crossport kit connects alternate outlet ports to combine the volume of two metering segments through a single outlet.

#### Description

Atmospheric safety relief indicators. High pressure rupture disc, pressure and lubricant vents to the atmosphere. Reset-type Performance Indicators. High pressure extends indicator. Reset indicator after pressure is relieved. All with thread 1/8 NPTF (M).

## Metering device

### MC2-HP

#### Description

MC2-HP metering devices are modular type metering devices consisting of a baseplate part containing all inlet and outlet connections and a metering sections part containing alternate outlet ports for installation of performance indicators. The baseplate part has one inlet, three to eight intermediate and one end section hold via three tie rods. The metering sections part consists of three to eight metering sections (depending on number of outlets needed) which are fixed on the baseplate part. All parts have FKM O-ring seals in-between. There must be a minimum of three metering sections. The metering sections will have either single or twin outlets. Whenever a single metering segment or crossport plate is used, the unused outlet must be plugged. Metering device has to be ordered in single parts, see chart.

#### Feature and benefits

- Alternate outlet ports for performance indicators
- For mineral oil based or synthetic lubricants
- Optional metering sections with visual cycle indicator
- Optional by-pass metering segment for addition or deletion of lubrication points

#### Applications

- Gas engines
- Compressors
- For applications with high system back pressure

#### Technical data

**XL**

### Description

XL metering devices are modular type metering devices. They consist of a baseplate as one piece and a modular metering sections part. The baseplate contains all inlet and outlet connections. The metering sections part consists of three to six metering sections (depending on number of outlets needed) which are fixed on the baseplate part. All parts have NBR-ring seals in-between. There must be a minimum of three metering sections. The metering sections will have either single or twin outlets. Whenever a single metering segment or a crossport or a singling plate is used, the unused outlet must be plugged. Metering device has to be ordered in single parts, see chart.

### Feature and benefits

- Several sizes and outputs
- Can be used as primary metering device in conjunction with UV type
- Baseplate as one single piece

### Applications

- Metal cutting machines
- Metal forming machines
- Wood-working machines
- Material handling machinery

| 87941        | reset-type         | —              | 140             | 2 000 |
| 87942        | reset-type         | —              | 205             | 3 000 |

#### Description

Closure plug to plug non-working outlets. External crossport kit connects alternate outlet ports to combine the volume of two metering segments through a single outlet.

#### Description

Atmospheric safety relief indicators. High pressure rupture disc, pressure and lubricant vents to the atmosphere. Reset-type performance indicators. High pressure extends indicator. Reset indicator after pressure is relieved. All with thread 1/8 NPTF(M).

## Metering device

### LP2

#### Description

SKF's standard in lubrication pinions, the LP2 is manufactured from a sturdy, wear-resistant, polyurethane material. These pinions are available in seven different module sizes with various widths and inlet fittings, as well as in corrosion classes C3-H or C5-M-H.

#### Feature and benefits

- Modular design with 12, 14, 16, 18, 20, 22 or 24 modules
- Each segment of the pinion has its own lubricant channel
- Lubricates only where necessary (tooth flanks)
- Higher rotational speed of up to 80 min<sup>-1</sup>
- Module widths from 80 to 240 mm

#### Applications

- Azimuth and pitch bearings in wind turbines
- Bucket wheel excavators in the mining industry
- Cranes in ports or on vessels

#### Technical data

|                       |  |
|-----------------------|--|
| Function principle    | lubrication pinion   |
| Operating temperature | -30 to +70 °C; -22 to 158 °F   |
| Operating pressure    | max. 150 bar; 2 175 psi  |
| Number of teeth       | 8  |
| Number of modules     | 12–24  |
| Pinion width          | 80–300 mm  |
| Lubricant             | greases up to NLGI 2   |
| Metering quantity     | max. 2 000 cm <sup>3</sup> /min  |
| Rotation speed        | max. 80 min <sup>-1</sup>  |
| Durability            | min. 1 million revolutions   |
| Material              | PU (polyurethane)  |
| Connection inlet      | 1/8 NPTF (F)   |
| Dimensions            | min. 112 × 91 × 216 mm<br>max. 270 × 314 × 357 mm<br>min. 4.4 × 3.58 × 8.5 in<br>max. 10.62 × 12.36 × 14.05 in |
| Mounting position     | any  |

<sup>1)</sup> It is possible to reduce the number of outlets below the given minimum by crossporting or closing outlets.

## Control units

### LMC 101

#### Description

The LMC 101 is a universal control and monitoring device suitable for single-line and progressive lubrication systems. Designed for off-road and mobile equipment only in drivers cabin use or industrial indoor use, this controller also can be utilized for any low-voltage lubrication application. Time or controller mode can be set for both systems. The LMC 101 must be programmed via USB connection to a PC. In timer mode, the lubrication cycle ends when the pre-assigned time has expired. In controller mode, the lubrication cycle ends when the pressure switch, pressure transducer or piston detector actuates. The system allows pressure to dissipate to the end of the supply line once pressure at the pump is reached.

#### Feature and benefits

- For 12 and 24 V DC systems
- Time or controller mode
- Various alarm condition settings
- Programming, data logging, and reporting
- Controller must be programmed via USB connection to PC
- Manual lubrication push-button

#### Applications

- Off-road equipment
- Mobile equipment
- Indoor industrial machinery
- Food and beverage industry
- Single-line and progressive systems

## Control units

### LMC 2

#### Description

The LMC 2 is a controller for the electronic management and monitoring of lubrication systems. It combines the advantages of a specially developed printed circuit board (PCB) and a PLC in an economical, compact unit. The desired application can be selected by a dip switch. Parameters can be set by using the menu and keypad. Special set-up configurations are also available on request. Two basic models are available (24 V DC and 230 V AC). The unit is mounted in its own IP54 enclosure and does not need to be integrated in a control cabinet. Besides time dependent intervals, an integrated counter also facilitates a cycle-dependent control of the lubrication intervals. The LMC2 can be integrated into common field bus systems via procedure-neutral interfaces.

#### Feature and benefits

- Integrated, flexible lubrication programs
- Well-structured prompting on the display for parameter settings and output signals
- 8 inputs / 5 outputs; suitable for complex lubrication systems
- Time- or cycle-dependent control of lubrication intervals
- Can be interfaced with common field bus systems
- IP54 enclosure

#### Applications

- Lincoln and SKF progressive systems, single-line, dual-line and multi-line systems
- Railway lubrication and spray lubrication systems
- Food and beverage
- Chain lubrication systems like Cobra and PMA

## Control unit

### LMC 301

#### Description

The LMC 301 is a compact, modularly expandable control and monitoring device. It is equipped with an LCD display and six functional keys for programming, parameter setting and signalization. The user is guided through the setup menu. Additionally, there is simple-to-use PC software for parameter setting and diagnostics available.

#### Feature and benefits

- Integrated, flexible lubrication programs
- Main device with 10 digital inputs, for 3 lubrication pumps and max. 6 pulse transmitters
- Up to 7 slave/extension with additional inputs for max. 10 pulse transmitters
- Three lubrication pumps can be controlled and monitored
- Can be connected to universal pulse generators

#### Applications

- General and heavy industry
- Steel industry
- Mining – stationary and mobile excavators
- Food and beverage
- Multi-, dual-, single-line and progressive systems

## Control units

### EOT-2

### Description

The EOT-2 controller is designed to control lubrication pumps during interval operation in multi-line systems. Rotary switches on the printed circuit board may be used to adjust lubrication time in seconds or minutes and pause time in minutes or hours. The EOT-2 is suitable for retrofit installation and often is used when a lubrication pump has no integrated control unit. Additional lubrication cycles can be triggered via a pushbutton.

### Feature and benefits

- Time controller for installation in driver's cabin
- Suitable for retrofit
- Simple handling of time setting and function control

### Applications

- Lubrication pumps without integrated controller
- Agricultural machinery, chain lubrication systems
- Simple lubrication systems in machines
- In connection with motor relay assembly; also preferred for three-phase multi-line pump units

### IG502-2-E

#### Description

The IG 502-2-E ... is a universal control and monitoring device for vehicles and is suitable for centralized lubrication in progressive and single-line systems. The compact device is equipped with a display panel for parameter settings and function monitoring. Different operating modes, such as timer, counter and monitoring functions for pressure and cycle switches, are programmable. The device has its own data memory to be independent of supply voltage. To avoid environmental influences, it is advisable to install the device inside a cabinet.

#### Feature and benefits

- Universal control and monitoring device
- Compact design
- Easy to operate
- Different operating modes, such as timer, counter and monitoring functions
- Red LED failure indicator also shows failure cause
- Integrated counters for permanent operation, failed hours and working-hour meter show system life cycle
- PIN lockout feature to prevent unauthorized programming changes

#### Applications

- Commercial vehicles
- Construction machines
- Farm machinery

#### Technical data

## Control unit

### IGZ / EXZT

#### Description

IGZ 51 and EXZT universal electronic control and monitoring devices are used in multi-line and progressive lubrication systems and are available in two voltage versions. Developed for stationary industrial applications, these devices may be installed in a switching cabinet or internally in a compact lubrication unit. They can be used as time-dependent or pulse-dependent controllers to initiate a lubrication cycle.

The EXZT devices control the pump running time and monitors simultaneously the strokes of the pulse generator or sensor of the metering device. All devices have custom-built functions integrated and can be set to meet system requirements.

#### Feature and benefits

- Combined universal control and monitoring device
- Easy installation by top hat rail mounting
- Adjustable operating modes
- Time operation or load-dependent machine-stroke operation
- Low-level control and EPROM included

#### Applications

- Stationary industrial applications
- Installation in switching cabinet of stationary general industry machines

#### Technical data

<sup>1)</sup> All models are with lubricant level monitoring, pulse generator; pump runtime limitation, adjustable interval and monitoring time

## Control units

### ST-102

#### Description

The ST-102 controller is designed for the control and monitoring of lubrication systems in vehicles with a 12 or 24 V DC power supply. It is a one-channel lubrication control center for systems with air-operated or electrical pumps. The ST-102 is suitable for environments with temperatures ranging from -30 to +80 °C (-22 to +176 °F) and features an IP 30 protection class. All lubrication configurations can be set in the field by the user.

#### Feature and benefits

- Available for 12 or 24 V DC
- Suitable for operational environments in extreme temperatures
- One-button user interface

#### Applications

- Vehicles
- Construction machinery
- Agricultural machinery
- Dual-line, progressive and single-line lubrication systems

#### Technical data

## Control unit

# 85307

## Description

The SKF 85307 lubrication controller provides confidence that machinery is receiving proper lubrication. Equipped with both visual and audible fault notifications, the unit's three-digit LED displays easy-to-identify codes so that lubrication system issues can be addressed quickly and efficiently. Compatible with single-line, dual-line and progressive lubrication systems, the lubrication controller has a durable, compact housing with a small footprint. Also, it is simple to install because the wiring harness attaches directly into the controller.

Optional data shuttle 85307-DS collects log files from 85307 controllers on site for later download to a PC for analysis. Up to 256 files are stored by serial number. 85307-DS also features lock/unlock 85307 controller configuration.

## Features and benefits

- Easy-to-identify error codes
- Visual and audible fault notification
- Small footprint; fits in any vehicle cab
- Simple to install
- Monitors reservoir level
- Counts lubrication cycles
- Operating temperature range of -15 to +50 °C (5 to 122 °F)
- 12-volt or 24-volt operation
- Timing intervals from five seconds to 24 hours

## Applications

- Off-road and mobile construction equipment
- General industry applications
- Chain lubrication systems
- Agriculture machinery

## Control units

# ST-1240-GRAFH-4

### Description

The ST-1240-GRAFH-4 is a four-channel lubrication control centre that supports any combination of single-line and progressive lubrication systems. The lubrication channels can be zones, separated by shut-off valves, or lubrication systems with separate pumping centres (max. 2) and varying lubricants. The ST-1240 control centre enables configuration in the field via color touchscreen display.

### Feature and benefits

- Designed especially for progressive systems
- Grease spraying control with air monitoring
- IP 65 protection rating
- Color touchscreen
- Remote control options (mobile app, webgate)

### Applications

- Stationary machines
- General industry
- Steel industry

## Control units

### ST-2240-LUB

#### Description

ST-2240-LUB-6 and ST-2240-LUB-14 lubrication control centers are suitable for use in dual-line lubrication systems, as well as single-line and progressive systems. These units have a touchscreen display and are only differentiated by the cabinet size and maximum number of lubrication channels served. The ST-2240-LUB-6 controls up to 6 separate lubrication channels, while ST-2240-LUB-14 controls up to 14 channels, each having independent lubrication parameters and allows use of different lubricants if required. The lubrication system is adjustable at field site by adding or reducing channel modules, and configuration can be changed in the field by the user.

#### Features and benefits

- Versatile and durable, automatic pump change (Dualset)
- Compatible with ultrasonic low level sensor
- Grease spraying control with air monitoring
- Compatible with SKF Doser monitor
- Remote control options (fieldbus, mobile app, webgate)

#### Applications

- Steel and mining and pulp and paper industry
- Food and beverage

#### Order information

## Monitoring devices

### HCC

#### Description

The hose connection control (HCC) is intended to monitor electrically conductive, high-pressure lubrication hoses for line breakage. If there is a fault in the main line or feed lines, the unit alerts the machine operator immediately. Operation of the HCC is not affected by line lengths, ambient temperature, pressure differential or pressure losses. Utilizing non-conductive lubricants or hydraulic fluids, this monitoring system has an operating pressure of up to 300 bar (4 350 psi) and can be used in temperatures ranging from –40 to +70 °C (–40 to +158 °F).

#### Feature and benefits

- Immediately detects hose ruptures
- Expandable at any time
- Easy retrofit in existing lubrication systems
- Monitors difficult-to-access hoses to lubrication points
- Common LED signal of all connected hoses on the display

#### Applications

- Construction and mining machines; cranes
- Wood-handling machines
- Forklifts, reach stackers and machines with movable units or accessories
- Agriculture

# Universal piston detector

### Description

The universal piston detector is a position sensor that is screwed into a metering device together with the relevant pressure-resistant adapter. The sensor detects the piston by means of the closed adapter without coming into direct contact with it. It adjusts itself independently after several distribution strokes. The universal piston detector automatically detects the customer's plug or cable assignment, 2-wire or 3-wire version (with cable break protection). The signal voltage can be applied to either pin 1 or pin 4, which means this sensor can be used for mobile applications such as vehicles or agricultural and construction machinery.

### Feature and benefits

- Efficient and reliable system monitoring
- LED switching status display (yellow)
- Timer setting on external controller detects operational function signal
- Counter setting can be used as cycle switch with an external controller

### Applications

- Construction machines
- Agricultural machines

## Monitoring devices

# Bipolar piston detector

### Description

The bipolar piston detector is a position sensor that is screwed into a metering device together with the relevant pressure-resistant adapter. The sensor detects the piston by means of the closed adapter without coming into direct contact with it. It adjusts itself independently after several distribution strokes. The bipolar piston detector is only available in a 2-wire version. The signal voltage can be applied to either pin 1 or pin 4, which means this sensor can be used for mobile applications such as vehicles or agricultural and construction machinery.

### Feature and benefits

- Efficient and reliable system monitoring
- LED switching status display (yellow)
- Timer setting on external controller detects operational function signal
- Counter setting can be used as cycle switch with an external controller

### Applications

- Construction machines
- Agricultural machines

## Monitoring devices

# Inductive piston detector

### Description

The inductive piston detector is a position sensor directly screwed into a lubrication metering device with no need for an adapter. The sensors detect the piston without coming into direct contact with it. It adjusts itself independently after several distribution strokes. The inductive piston detector is available in a 3-wire version.

A strong external magnetic field can prevent reliable detection of the piston – leading to detection faults and under-lubrication. The inductive piston detector prevents this. It offers a good resistance against magnetic fields and is more stable in the presence of EMC interference compared to an universal detector or a bipolar piston detector. This makes it suitable for use with valve islands.

### Feature and benefits

- Efficient and reliable system monitoring
- LED switching status display (yellow)
- Timer setting on external controller detects operational function signal
- Counter setting is used as cycle switch with an external controller
- Inductive piston detectors work reliable in strong magnetic fields, to avoid under-lubrication
- Counter setting can be used as cycle switch with an external controller

### Applications

- Construction machines
- Agricultural machines
- Pulp and paper mills
- Food and beverage
- Railway applications
- Heavy industry
- Wind turbines

## Monitoring devices

# SmartPlug lubrication control

### Description

The SmartPlug lubrication control is a simple, multifunction switching device that can be used as a timer or pulse counter when no standard timer is available. Operation with on-delay or signal-inverter functions also is possible. Suitable for retrofitting, the SmartPlug can be installed easily in an existing electrical system. Its complimentary programming timer can be adapted directly between a sensor and the connecting cable.

### Feature and benefits

- Simple, cost-effective, multifunction switching device
- Acts as timer or pulse counter
- Easy installation in electrical systems
- Suitable for retrofitting in existing systems
- Free programming timer

### Applications

- Progressive systems where additional monitoring of separate lubrication circuits is required
- Counter for chain lubrication systems
- Forklifts
- Chain lubrication

## Monitoring devices

### SP/SFE30

#### Description

SP/SFE30 pulse generators are designed to monitor oil and grease volumetric flow rates. The switching pulses are generated at a rate proportional to the volumetric flow, and the pulses from the pulse generator are evaluated by a downstream control unit. SP/SFE30/6GL pulse generators have been approved by German Lloyd for use on ships.

#### Feature and benefits

- For oil and grease NLGI 1
- Operating pressure of up to 600 bar (8 700 psi)
- Germanischer Lloyd-approved device available

#### Applications

- Progressive lubrication systems
- General stationary industry machines
- Ships
- Wind energy systems
- Glass industry

## Monitoring devices

### EWT2A

#### Product description

The EWT2A series of universal pulse monitoring devices can be used in all standard SKF lubrication systems. The pulse, generated from a progressive metering valve sensor, a pulse generator or a rotary gear sensor, must be received within a pre-selected and defined value. Depending on the selected version, a minimum and a maximum value can be monitored simultaneously for two or three pulse inputs. The EWT2A pulse monitoring devices are available in two voltage versions and may be installed in a switching cabinet. All devices have custom-built functions integrated and can be set to meet system requirements.

#### Features and benefits

- Easy installation by top hat rail mounting
- Adjustable operating modes
- Monitoring time 6–90 seconds
- Settings possible from 0,01 to 2 500 pulses/minute

#### Applications

- In connection with a pulse generator for oil and grease to reliably monitor lubricant flow

#### Technical data

## Pressure sensor

234-13161-5

### Description

This compact, maintenance-free electronic pressure switch has a 3-digit, digital display, one switching output and an analog output signal for switching point and hysteresis. Both can be adjusted via push buttons. For optimum adaptation to a particular application, the instrument has many additional adjustment parameters, e.g. switching delay times, NO and NC function of the outputs.

### Features and benefits

- Integrated pressure sensor with thin-film strain gauge on stainless steel membrane
- 3-digit, digital display
- Independently adjustable switch-back hysteresis and switching point
- Reverse polarity protection of the supply voltage, excess voltage, override and short-circuit protection are provided
- Password protected
- Directly installable via G 1/4 adapter into pressure line

### Applications

- Marine and off-shore applications
- Steel and heavy industries
- Wind turbines
- Service vehicles

### Technical data

## Pressure sensor

2340-00000108

### Description

This maintenance-free analogue pressure sensor is suitable for pressure measurements for gases and fluids. It is user friendly and can be applied easily in standard or superior applications. The space-saving housing is pivotable up to 320° for optimal readability of the 4-digit, digital display. Switching output for analogue or digital signals incl. IO-Link. It comes with reverse polarity protection of the supply voltage, excess voltage, override and short circuit protection. Different value units such as bar, mbar, psi or MPa can be selected.

### Features and benefits

- IO-link incl. counter for operating hours, pressure peaks and inner temperature
- Menu-guided adjustments via push buttons
- Pre-adjustable hysteresis
- Programmable parameters, password protected
- Compact housing with 320° pivot

### Applications

- Marine and off-shore applications
- Steel and heavy industries
- Wind turbines
- Service vehicles

#### Technical data

|                       |   |
|-----------------------|---|
| Order number          | 2340-00000108                                 |
| Function principle    | analogue/digital pressure switch              |
| Lubricant             | oil, fluid grease and grease up to NLGI 2     |
| Approval              | CE, EAC, UL/CSA                               |
| Operating temperature | -40 to +85 °C; -40 to +185 °F                 |
| Operating pressure    | max. 600 bar; max. 8 700 psi                  |
| Overload pressure     | 1 000 bar; 14 500 psi                         |
| Burst pressure        | 1 570 bar; 22 770 psi                         |
| Operating voltage     | 18–30 VDC                                     |
| Operating current     | max. 150 mA                                   |
| Current draw          | ≤ 50 mA                                       |
| Output signal         | 2x PNP/NPN (NO/NC) adjustable                 |
| Analogue Output       | voltage 0..10 V / current 4..20 mA adjustable |
| Interface             | IO-Link 1.1                                   |
| Switching frequency   | 170 Hz  |
| Switching cycles      | 100 Mio.                                      |
| Material:             |   |
| Housing               | PA6.6, stainless steel 1.4301, FKM            |
| Measuring cell        | Ceramics Al2O3                                |
| Apapter               | stainless steel                               |
| Electrical connection | M12x1; 4-pole, A-coded                        |
| Pressure port         | G1/4  |

## Notes

**!** **Important information on product usage**

SKF and Lincoln lubrication systems or their components are not approved for use with gases, liquefied gases, pressurized gases in solution and fluids with a vapor pressure exceeding normal atmospheric pressure (1 013 mbar) by more than 0,5 bar at their maximum permissible temperature.
